OUR FOUNDATION:
A DECADE IN REVIEW

The Rory Staunton Foundation
For Sepsis Prevention
New York passes Rory Staunton's Law, giving all school children access to sepsis education and requiring 468,000 medical professionals to complete sepsis training.

Nearly 2 million Americans view People Magazine's video on Rory Staunton's story.

Foundation partners with American Federation of Teachers to create and disseminate first K-12 sepsis education curriculum.

Report shows N.Y. sepsis protocols resulted in a significantly greater decline in mortality in New York compared with states that did not implement mandatory protocols.

Foundation launches major program to combat the maternal sepsis crisis.

New York passes Rory Staunton's Law, giving all school children access to sepsis education and requiring 468,000 medical professionals to complete sepsis training.

Major report shows rapid application of N.Y. sepsis protocols reduced pediatric sepsis deaths by 40%.

Foundation launches major program to combat the maternal sepsis crisis.

Sepsis in America: Our Decade of Progress
Sepsis killed our son, a tragedy beyond comprehension.

A message from the Founders:

On April 1, 2012, at 6:29 pm, our 12-year-old son, Rory Staunton, died from undiagnosed, untreated and preventable sepsis. The medical community to whom we had entrusted his care missed every symptom. Until our son’s death we had never heard the word "sepsis". We later learned it kills more than 250,000 Americans every year.

Despite our intense grief, we knew our son would have wanted us to do all in our power to spare others his fate. To honor Rory's life, we founded the Rory Staunton Foundation for Sepsis Prevention.

Since then, we have stopped at nothing to achieve change. We knocked on the doors of New York’s Governor and Health Commissioner and in 2013, Governor Andrew Cuomo signed Rory's Regulations into law, along with a Parents' Bill of Rights. The regulations mandate that every hospital in the state must establish sepsis protocols, making New York State the first in the nation to create enforceable actions when sepsis could be present. Today, Rory's Regulations have saved thousands of lives. The data gathered from the protocols have advanced sepsis research and policy and been published in numerous peer-reviewed journals.

We began an intensive campaign to educate the public about the dangers and signs of sepsis. We painfully relived the details of Rory's death on the TODAY Show, Dr. Oz and a host of media outlets and were featured in People Magazine with over 44 million readers. The New York Times article regarding Rory's death became its most shared.

We have advocated for change at the federal and state levels, speaking in the chambers of the United States Senate and successfully compelling the CDC to declare sepsis “a national emergency” and to include sepsis information on their website. Our foundation developed sepsis education modules endorsed and promoted by the American Federation of Teachers and we created public services announcements viewed by millions. Through our National Family Council on Sepsis we have addressed doctors, nurses, and industry specialists, urging them to be vigilant in the hunt for sepsis. We do all this knowing it will never bring our Rory back, but with the belief that our work is saving lives.

This has been a decade of action and advocacy—but we are far from the finish line and there is still much to be done. While many states are adopting the Rory's Regulations model, many more are mired in inaction and too many Americans are still unaware of the threat of sepsis. Our goal is to end sepsis and we will not stop until sepsis is known and understood throughout the world—in Rory's name and in the name of so many we have learned to love and mourn on this journey.

To all who have supported our work over the past decade, we thank you from the bottom of our hearts. You have inspired and strengthened us and made this progress possible.
